

BIN FOCUS ASSISTED PICKING ROBOTS

Assisted Picking Robots can display images of goods to be picked, self-learn and calculate optimal navigation routes.

HIGHLIGHTS OF THE TECHNOLOGY

Features:

Integrated in WMS

Navigate to picking location

Display information on the item to be picked

Autonomously drive to the next target location

Calculate most efficient travel route

Benefits:

Immensely improve productivity and reduce error rate

Reduced travel time

30%–180% increase in units picked per hour

Lower physical strain

Not compromising on safety

80% decrease in training time
