

DHL Express and Phillips 66 advance Sustainable Aviation Fuel usage in the U.S. through multi-year agreement

- Agreement for over 240,000 metric tons (approximately 83 million gallons) of Sustainable Aviation Fuel (SAF) over three years
- The use of SAF under this agreement is expected to reduce lifecycle greenhouse gas emissions by approximately 737,000 metric tons compared to conventional jet fuel
- This agreement is among one of the largest SAF deals by a U.S. producer and for the air cargo sector

Bonn, November 18, 2025: DHL Express, the world's leading international express service provider, has announced a significant Sustainable Aviation Fuel (SAF) agreement with Phillips 66, a leading integrated downstream energy provider and SAF producer headquartered in the United States. This agreement will see the delivery of over 240,000 metric tons of SAF over a three-year period, aimed at reducing lifecycle greenhouse gas emissions by approximately 737,000 metric tons compared to conventional jet fuel, marking a major milestone in DHL's commitment to sustainability.

The majority of the SAF will be delivered to Los Angeles International Airport (LAX), DHL's U.S. West Coast Gateway, with future intended deliveries to other West Coast airports where DHL maintains operations, such as San Francisco International Airport (SFO). Utilizing a book-and-claim approach, DHL Express is able to manage its carbon footprint through the use of sustainable fuels in the aviation sector. The SAF will be produced at Phillips 66's Rodeo Renewable Energy Complex in California, one of the world's largest renewable fuels facilities with a production capacity of 150 million gallons per year of neat SAF (i.e. SAF that is not blended with conventional jet fuel).

Travis Cobb, EVP Global Operations and Aviation at DHL Express, stated: "This agreement with Phillips 66 is a significant milestone for DHL Express as we work towards our sustainability goals. By securing a reliable supply of SAF, we are not only reducing our carbon emissions – and those within our customers' supply chains – but also setting a precedent for the logistics and air cargo industries in the U.S. Our collaboration with Phillips 66 underscores our commitment to a lower-carbon future and demonstrates the importance of sustainable practices in our operations."

Brian Mandell, EVP Marketing and Commercial at Phillips 66, stated: "This agreement between Phillips 66 and DHL demonstrates our shared commitment to SAF market leadership and credible action in the growing SAF industry. Through our global renewable fuel business, we are committed

Press release

to supporting DHL and our customers in achieving their decarbonization goals. Our agreement with DHL showcases cross-industry collaboration, and together, we aim to drive progress toward sustainable solutions in the aviation sector.”

The agreement with Phillips 66 represents one of the largest SAF deals by a U.S. producer and for the overall air cargo sector, paving the way for future collaborations in the SAF space. DHL Express has a long-standing commitment to sustainability, and this deal aligns with its broader strategy to achieve net-zero greenhouse gas emissions by 2050.

DHL Express has been actively securing SAF partnerships worldwide including in the Europe, America and Asia Pacific regions since 2021, and this new agreement exemplifies its dedication to leveraging sustainable aviation fuels to address its air freight carbon footprint effectively. This agreement will contribute significantly to DHL's GoGreen Plus service, which enables customers to reduce their Scope 3 greenhouse gas emissions using SAF. Through innovative solutions like this, DHL Express continues to lead the logistics industry in addressing climate change while providing reliable and efficient services to its customers.
